

# SPIDER FS 320Z

# CASE STUDY

## NATURE OF JOB:

Indoor light fitting

## REASON FOR CHOOSING THIS SPIDER LIFT:

Good outreach required, tracked, articulated to clear obstacles

Lighting on the roof of an indoor snow centre needed to be repaired and replaced.

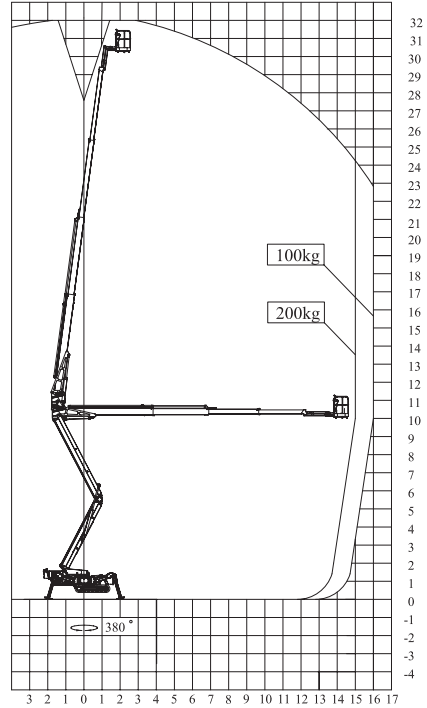

The articulated FS 320Z provided access to the roof by going up and over a balcony that ran along one side of the centre.

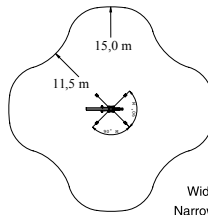

The floor of the centre was sloped but the tracked Spider was able to negotiate this and its non-marking tracks meant the artificial snow wasn't marked. The extendable jib allowed the operator to easily access those hard-to-reach places up high in the snow centre.
